Bed Side Paging

Nurse Call Paging Solutions

For healthcare and hospitals, SOLT offers a range of messaging call buttons and pagers that dramatically improve on-site communication for staff-to-staff and patient-to-staff interactions. Hospitals are currently under severe pressure from both patient volume and staff shortages. So the obvious way to improve is to increase efficiency - but how can that be achieved?

SOLT Bed Fall Detection

Bed Fall Detector

The SOLT patient bed fall detection alarm system is a tool and a lifeline for hospitals and nursing homes. It is designed to immediately alert staff when a patient falls out of bed, a crucial function that can make all the difference in ensuring patient safety. This system is essential for ensuring that patients receive prompt assistance during a fall.

SB5-1PWH-P

SB5-1PWH-P

The SB5-1PWH-P nurse call system enables patients in bed or in areas where they cannot reach a call button to call for help. The push cord cable runs from the SB5 call button and can be placed in the patient's hand or within reach. This ensures that if they need help, they just need to press the button attached to the cord instead of trying to reach or locate the actual button itself.

Pull String Call Button

SB6-2XWH-S

The SB6-2XWH-S Call button is a pull-chord call button that allows patients and residents of care homes to request assistance by pulling the cord. This eliminates the need to reach the call button physically and can be placed by bedsides, chairs, or other areas where accessing the physical button might be difficult.

SB5-1PWH-F

Nurse Call System Hands Free

The SB5-1PWH-F is a floor pedal call button that allows patients within the hospital or nursing home to call for assistance without using their hands. Attached to the SB5 call button, this system is perfect for patients who cannot reach call buttons or cannot use their hands to call for help.

Staff Paging

Keep Your Staff Connected- Always

Ensuring patient care in hospitals and healthcare centres can be difficult when under constant stress. But SOLT has created a range of communication devices, such as call buttons or 'bells', and other products. Once hospitals manage patients and patient flow properly, overall service and support levels increase dramatically, and patients receive superior care.

Staff wearing watch pagers can respond to calls immediately, ensuring patients are cared for at all times.

Main Benefits:

Reliable products | Many use designs | Improved patient care | Improved patient flow | Easy setup and use | Excellent pricing | Excellent warranty | Made in Korea

Features of the SP9:

- Colour LCD
- Easy to use
- Call data management
- Up to 5 days usage and standby
- Watch function in standby
- Improved water-resistant properties (IP-7)
- Voice alarm through speaker (beep)
- Call ID Config
- Comfy wrist strap
- Size

SP9 Staff Watch Pager

The new SP9 has arrived and is better than ever. This updated design resembles a regular watch and features improved water-resistant materials, enhanced data management, vibrant colour LCDs, longer battery life, and many additional benefits.

Call back staff to the kitchen, front of house, or office instantly. The SP9 not only looks great but also has the technology to match. Give staff the communication tools they need to be proactive at work.
